

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph on page 3, lines 4-9, with the following amended paragraph:

Although the light emitting apparatus disclosed in Japanese patent application laid-open No. 2001-217466 has a reflection mirror, plenty of dispersion will be caused by the phosphor provided around the LED. Because of this, the emission efficiency must be lowered since the light is not sufficiently outputted in the direction of emission observation surface.
